## SOLID STATE RELAYS

MAGNETIC SENSORS

REED RELAYS \& SWITCHES

MADE IN
FRANCE

## DEAR CUSTOMERS AND READERS,

With a great feeling of honor I am proud to introduce the first celduc® American catalog celebrating the creation of our marketing and sales office in Chicago during the summer of 2020.

## A milestone in celduc® 60 years history

From the first solid state relay in the
 early 80's, celduc® has been constantly bringing new solid state power switching solutions to the customers and has become a global expert in solid state relays and contactors. Our iconic "okpac®" relays beautifies industrial enclosures with its famous blue color all over the world and has created a new standard of quality and reliability for Solid State Relays with more than 1,000,000 pieces being manufactured in our factory in France every year. With a strategy based on products quality recognition and technical cooperation with our customers, we have convinced the most reputed names in the market to join the celduc® adventure, have gone through a fantastic growth all these recent years and have established our brand as the unquestioned SSR leader in Europe. Now it is time for the biggest challenge: Americas!

## Always the same ambition: bringing excellence in the solid state relays world

How? It is simple: our solid state relays are based on a unique design of thyristor chips mounted on substrate, connected together and soldered on an aluminum base in a 100\% automated and oxygen free process. The result: our relays withstand more current than the others, have a better thermal derating, and last 50 \% longer (at least). Just try them: you will not get rid of our relays easily!

## New ideas and proven technologies

This is the good thing when the engineers and the manufacturing are in the same location: from concept to technology, from design to product, from optimization to new machines, there are only a few doors to cross. Like everyone in our market, we have to choose every year between new machines and new low cost production overseas, unlike everyone in our market, we always choose new machines. At the end, celduc® has definitely the highest automation level in our industry, our unrivaled quality scores demonstrate it.

So, ready to make your switch to celduc®? Enjoy our catalog, and get in touch with our team!

Jean PERROT
CEO celduc® Inc.

## MORE THAN 50 YEARS OF HIGH QUALITY LEVEL OF PRODUCTION IN FRANCE.

## ANALYSIS OF OUR CUSTOMERS' REQUIREMENTS

celduc (®) relais is the leading global expert and preferred choice for companies all over the world.

## CONSTANT PRODUCT DEVELOPMENT

our experienced R\&D engineers are constantly working on developing new products; these represent 10 to $15 \%$ of our total production output.

CONTROL OF THE COMPLETE CHAIN
design, development, production, testing and marketing.

## WITH A GLOBAL PRESENCE IN OVER 60 COUNTRIES

we have a local presence for our customers. We can therefore better understand their needs and provide them with the best solutions.

## WE COMPLY WITH THE MAIN INTERNATIONAL STANDARDS

our products are designed, tested and manufactured in accordance with the strictest international standards.

## celduc® relais' products

## SOLID STATE RELAYS

Commonly known as SSRs, Solid State Relays represent 70\% of celduc® relais' turnover.
These innovative and very efficient devices are used to control all types of loads used across many industries, such as industrial heating, temperature control, motor control, automation interfaces, etc
The advantages of Solid State Relays (SSR) compared to ElectroMechanical Relays (EMR) are well known (see page 6). celduc® relais is the only solid state relay technology in France, where their products have been made for more than 50 years!

## MAGNETIC PROXIMITY SENSORS

Used for monitoring or controlling levels, motion, movement, position and rpm recording. The sky's the limit for these versatile sensors. These sensors are used both by the general public and in major industries, such as automotive, aircraft, telecommunication and automation.

## "REED" RELAYS \& SWITCHES <br> 

Our Reed switches are used in our own magnetic proximity sensors, Reed relays and Reed switches. Tried and tested, they can last for over 60 years. The range meets the demands of an increasing number of new applications, thanks to their ease of use, compact size and reliability.

## SOLID STATE RELAYS

## APPLICATIONS

EVERY DAY, MORE AND MORE NEW APPLICATIONS THAT REQUIRE RELIABILITY, SILENT OPERATION AND A LONG SERVICE LIFE USE OUR INNOVATIVE SOLID STATE RELAYS.
HERE ARE SOME EXAMPLES:

## HEATING

Plastics processes, Furnaces, Food distribution, Air conditioning, Textiles, Domestic heating, Infrared heating, Drying, Thermoforming, etc.

## MOTOR STARTING

Pumps, Compressors, Plastics processes, Conveyors, Fans, etc.

## LIGHTING

Public lighting, Cinema, Theater, Airport runway lights, Road lighting, etc.

## AUTOMATION

Automation interfaces, Heating element control, Electrovalves, Contactor Coils, Sensor optical isolation.

## MISCELLANEOUS

Transformer starting, Power factor correction, Uninterruptible power supplies, Energy source switching, Capacitor banks.

## COMPLIANCE WITH STANDARDS SPECIFIC TO EACH INDUSTRY

IN MANY SECTORS, EQUIPMENT COMPONENTS HAVE TO MEET VERY STRICT REQUIREMENTS THAT ARE SPECIFIC TO EACH INDUSTRY.

All of our okpac® SO (as well as SC relays), celpac® 2G SU/SA (including the ESUC current monitoring module) and 2-phase SOB and 3-phase SGT ranges comply with the EN61373 European standard for railway applications and rolling stock equipment: shock and vibration tests.
The following standards relating to fire behavior and fumes are classified: NF F16-101, NF F16-102, EN 45545 and EN 60695-2-10/11/12 (Glow Wire tests (GWFI - GWIT)), blue and black plastic covers and encapsulating resin of SO and SU/SA relays. Our products are also compliant with the EN 50155 standard which applies to all electronic equipment for control, regulation, protection, diagnostic, power supply, etc. installed on rail vehicles.

Several of our products comply with the requirements for medical applications in accordance with EN 60601-1 (VDE 0750).

## SOLID STATE RELAYS

## STANDARDS

## CELDUC® RELAIS HAS DEVELOPED ALL OF ITS OWN EQUIPMENT TESTS. OUR PRODUCTS ARE MANUFACTURED IN ACCORDANCE WITH THE MOST STRINGENT INTERNATIONAL STANDARDS.

- The solid state relays and contactors made by celduc® relais are manufactured in compliance with major international standards :
- IEC/EN60947-4-3 for the other loads
- IEC/EN60947-4-2 for motor control
- IEC 62314
- American and Canadian (UL, cUL, CSA)
- IEC/EN 60950 - VDE0805
- IEC60335-1 - VDE0700-1

Our products also comply with the main European CE marking directives.

- In the UL508A standard, the estimated short circuit current rating is known as the SCCR: Short Circuit Current Rating. On April 1, 2015, our solid state relays successfully attained 100kA UL SCCR certification. In fact, some of our customers request additional certification with an SCCR greater than 5KA in accordance with supplement SB, an appendix to UL 508A.
- Several of our products fulfill the requirements for KOSHA (S-MARK) and EAC (Russia-CIE) certification.
- Our relay manufacturing process complies with ISO9001, version 2008. Our products contain extremely reliable components with a very high level of electromagnetic interference. They therefore have the longest product lifetime on the market.

## celduc® relais MANUFACTURES CUSTOMISED PRODUCTS

CELDUC® RELAIS DESIGNS SPECIFIC PRODUCTS IN LINE WITH OUR CUSTOMERS' SPECIFICATIONS AND ADAPTS PRODUCTS FOR OUR CUSTOMERS' APPLICATIONS.

A specific development consisting of SU relays and ESUC modules to control 9 resistive loads with partial load failure detection. This system includes all protections.

Solid state contactor + changeover relay for 3-phase motors.
Dry contact control.
Spring connector.

Motor inverter
with 5 solid state relays.

Solid state relays with IO-Link communication system. Today, it is clear that communication and safety are our two biggest concerns; these issues will challenge us further as we head into the future...

-IGBT Technology ..... 37
HEATSINKS \& ACCESSORIES ..... 38

## SOLID STATE RELAYS

## WHAT IS A SOLID STATE RELAY / CONTACTOR?

Solid state relays are switching devices made using electronic components. We use the word "relays" as an analogy. An electromechanical relay is an electrical switch that is typically operated by using electromagnetism to operate a mechanical switching mechanism. "Solid state" refers to the fact that these devices do not have any moving parts.

A solid state relay switches power (AC or DC) to the load circuitry and provides electrical insulation between the control circuit and the load circuit. This technology competes with or is an addition to electromechanical relays and other switching technologies such as relays and mercury switches.
A solid state relay consists of:

## ADVANTAGES OF SOLID STATE SWITCHING

LONG SERVICE LIFE: SSRs do not have any moving mechanical parts so they are not subject to wear and tear or deformation. When used correctly, a solid state relay has a service life that is 200 times longer than that of an electromechanical relay (EMR).

VERY LOW ENERGY CONSUMPTION: a low drive power makes it possible for the solid state contactors and relays to switch strong power loads.

SILENT OPERATION: this technology does not generate acoustic noise while the outputs are changing state. This is a very important advantage when it comes to domestic and medical uses.

SHOCK AND VIBRATION RESISTANCE: No risk of accidental switching with solid state technology.

VERY HIGH SWITCHING FREQUENCY.
for very accurate adjustment
(temperature, etc.)

OTHER TYPES OF CONTROLS (specific choice
of switching time) and possible diagnostic features.

## ZERO-CROSS RELAY OR RANDOM RELAY?

For ZERO VOLTAGE CONTROL (OR ZERO CROSS RELAY), power switching only takes place at the beginning of the alternation after the control has been applied. In fact, switching the power component only takes place at close to zero volts.
For resistive or capacitive loads, it is preferable to use zero cross relays which can limit the di/dt, disturbances on the network and increase the service life of the load and the relay.

For INSTANTANEOUS CONTROL (OR RANDOM RELAYS), power switching takes place as soon as the control voltage has been applied (turn-on time less than $100 \mu \mathrm{~s}$ ). This type of control is used for all INDUCTIVE loads where the phase shift between voltage and current can cause problems with zerocrossing relays.
It is also used in applications where precise control of power to the load is required (phase-control applications).

REMINDERS : Zero-cross for all loads / heavy duty loads: SO8, SA8, SMT8, ...
Zero-cross for standard industrial loads / resistive loads: SO9, SUL9, SGT9, ... Random: SO7, SUL7, SGT7, ...

## SOLID STATE RELAYS

## THYRISTOR RATING VS SWITCHING CURRENT

Thyristors are used as the switching components in solid state relays for alternating currents. The ratings of our power components are specified in this catalog. These products must be mounted on heatsinks in order to reach nominal performance. "Thyristor rating", which is an indication of the size of the power component, must not be confused with "switchable current" which depends on how the relay or contactor has been built and how it is used. To correlate the switchable current with the relay and your application, refer
to the tables and thermal curves in our data sheets for products that are not equipped with heatsinks as standard.

Our solid state relays are fitted with back-to-back thyristors and use 4th generation TMS² technology with a very long service life compared to the majority of products on the market (application note available on request).

## VOLTAGE PROTECTION

Strong dv/dts may appear on the solid state relay terminals. These can also be generated by mains interference and by the zero cross current turn-off on inductive load. In relays adapted to most loads, celduc®relais uses components with a high level of immunity and sometimes an RC protection network.

Overvoltages can also occur in the power supply and may cause the solid state relay to turn on, even without control. To solve this problem, celduc® uses 1200 V or even 1600 V components. In some ranges, it includes a surge arrestor, also known as a varistor or a
VDR (Voltage Dependent Resistor), placed on the solid state relay terminals on the socket side. For resistive load relays, celduc® relais can also supply a surge protector (TVS (transient-voltage-suppression) diodes on triggers) which closes the relay in the event of an overvoltage to protect it.

## CURRENT PROTECTION

$\rightarrow$ USING A FUSE: to protect the solid state relays against load short circuits, fuses must be used, particularly fast-acting fuses for small ratings. The $I^{2} t$ value of the fuse must be less than half of the $I^{2} t$ value of the relay. $\rightarrow$ USING A CIRCUIT BREAKER: this method of protection can be adapted to solid state relays with a $1^{2} \mathrm{t}$ value > $5000 \mathrm{~A}^{2} \mathrm{~s}$.
(technical note on request).

## RELAY OVERHEATING/HEATSINK

Solid state relays must cool down sufficiently so that the junction temperature (at the core of the power element) does not exceed the specified values: typically $125^{\circ} \mathrm{C}$ or $150^{\circ} \mathrm{C}$ (this value depends on the power components).

Cooling will prevent it from reaching heatsink temperatures (parts that can be touched) that are too high ( 90 or $100^{\circ} \mathrm{C}$ ). To select the appropriate heatsink for your needs, use a calculation or refer to the graphs provided by celduc $®$ relais in the technical data sheets available on this website www.e-catalogue.celduc-relais.com

## INTERFACE RELAYS

SLIM
$\rightarrow$ Miniature size

SLA/SLD solid state relays are $100 \%$ compatible with 5 mm wide electromechanical relays. They can be soldered directly on to PCBs or plugged into all types of DIN rail standard bases. These relays can switch all types of loads and they can withstand significant current surges from loads in electrovalves, motors, contactor coils, LEDs, etc. The switching power for SLA relays is $2 \mathrm{~A} / 280 \mathrm{VAC}$ and $2.5 \mathrm{~A} / 60 \mathrm{VDC}$ or 4A/24VDC for SLD relays.

|  | Product reference | Switching current | Switching voltage | Control voltage | Protec. / Specifications |

$\rightarrow$ Diagnostic status output (volt-free)
$\rightarrow$ Control visualization via a green LED
$\rightarrow$ Output DC visualization via a red LED
$\rightarrow$ Built-in clamping voltage
$\rightarrow$ Built-in free wheel diode
$\rightarrow$ This product also includes a fuse on board to protect the installation.

## XKLD0020 includes all the built-in protective devices and is designed for inductive loads with high switching frequencies :

|  | Product <br> reference | Switching <br> current | Switching <br> voltage | Control voltage | Protec. |
| :---: | :---: | :---: | :---: | :---: | :---: |

- Dim. $36 \times 78 \times 61 \mathrm{~mm}$
$(1.42 \times 3.07 \times 2.40 \mathrm{in})$

| Product reference | Switching current | Switching voltage | Control voltage | Protec. | Specifications |
| :---: | :---: | :---: | :---: | :---: | :---: |
| XKM22440 | 5AC-51 / 2.5AC-53 | 24-460VAC | 15-40VDC | VDR | 2 poles motor switching control |
| XKR24440 | 5AC-51 / 2.5AC-53 | 24-460VAC | 15-40VDC | VDR | AC motor change-over control |
| XKRD30506 | 5A-DC | 7-36VDC | 7-30VDC | diode | DC motor change-over control |

This ready-to-use, DIN-rail mounted XKRD30506 module consists of four solid state relays. It is wired as an inverter which can be used to change the direction of a DC motor (100W @ 24Vdc).

## XKR/XKRD

- Dim. $58.2 \times 76.4 \times 53 \mathrm{~mm}$
$(2.28 \times 2.99 \times 2.09 \mathrm{in})$

## RELAYS FOR PRINTED CIRCUITS

## SKA SKB

The printed circuit SK range is available in different models: SKA/SKB (AC output) or SKD/SKLD (DC output).
$\rightarrow$ SKA can switch currents up to 5A, switch voltages of 230 or 400VAC and it has built-in voltage protection. This range is ideal for motor control applications, electrovalves and resistive loads.
$\rightarrow$ SKB can switch currents up to 5 A , switch voltages of 230 or 400 VAC and is only used for controlling resistive loads.

| Product <br> reference | Current | Switching <br> voltage | Control <br> voltage | LED | $I^{2}$ t | Protec. | Specifications |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| SK541101 | $2.5 A$ | $24-280 V A C$ | $3-30 V D C$ | no | $50 A^{2} s$ | - | AC zero-cross output / |
| normaly closed |  |  |  |  |  |  |  |$|$

- Dim. $43.2 \times 10.2 \times 25.4 \mathrm{~mm}$ $(1.69 \times 0.39 \times 0.98 \mathrm{in})$

The SKL range use $\mathrm{TMS}^{2}$ technology which reduces thermal stress and improves product service life. The power components range from 16A to 75A. Ideal for motor or lighting control, this range can withstand significant inrush currents ( $1^{2} \mathrm{t}$ up to $5000 \mathrm{~A}^{2} \mathrm{~s}$ ). It can also be used for controlling heating elements. Option of short circuit protection using circuit breakers.

| Product reference | Max. current with heatsink | Thyristor rating | Switching voltage | Control voltage | $1^{2} \mathrm{t}$ | Specifications |

See DC output models on pages 36-37

## RELAYS FOR PRINTED CIRCUITS

## SKH

SKH is a "ready to use" range of solid state relays for printed circuits.
Each relay has a built-in heatsink.

| Product reference | Output current | Output current with ventilation | Switching voltage | Control voltage | $1^{2} \mathrm{t}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| SKH10120 | 10A @ 20 ${ }^{\circ} \mathrm{C}$ | 16A | 12-280VAC | 4-14VDC | 128A ${ }^{2} \mathrm{~S}$ |
| SKH10240 | 10A @ 25 ${ }^{\circ} \mathrm{C}$ | 25A | 24-600VAC | 4-14VDC | $450 A^{2} \mathrm{~S}$ |
| SKH20120 | 10A @ 20 ${ }^{\circ} \mathrm{C}$ | 16A | 12-280VAC | 8-32VDC | $128 A^{2} \mathrm{~S}$ |
| SKH20240 | 10A @ 25 ${ }^{\circ} \mathrm{C}$ | 25A | 24-600VAC | 8-32VDC | $450 A^{2} \mathrm{~S}$ |

Other models are available on request

- Dim. $43.6 \times 22 \times 35.7 \mathrm{~mm}$
$(1.69 \times 0.87 \times 1.38$ in)

## SN8

This relay is designed for printed circuits and, when fitted with a suitable heatsink, can control heavy loads in an ultra-miniature, physically compact package. $\qquad$

- Dim. $35.05 \times 12.7 \times 28.32 \mathrm{~mm}$ $(1.38 \times 0.47 \times 1.10 \mathrm{in})$

## SHT

Three-phase solid state relay in a single low profile package for printed circuits.
This relay is designed for PCB applications. Complete with a heatsink, it provides control of medium power in three-phase networks.

| Product reference | Current | Switching <br> voltage | Control voltage | $1^{2 t}$ |
| :---: | :---: | :---: | :---: | :---: |
| SHT842300 | $3 \times 25 A$ | $24-280 V A C$ | $10-30 V D C$ | $260 A^{2} s$ |

Other models are available on request

- Dim. $81.28 \times 8.26 \times 27.69 \mathrm{~mm}$
$(3.19 \times 0.31 \times 1.06 \mathrm{in})$

## APPLICATIONS

Electrovalves, LEDs, contactors $\frac{\mathrm{ld}=1.4 \times \ln }{\text { SKA }}$

$$
\frac{\mathrm{Id}=1.4 \mathrm{xln}}{\mathrm{SKB} / \mathrm{SKL}}
$$

## SINGLE PHASE SOLID STATE RELAYS

All our solid state relays are fitted with back-to-back thyristors and use fourth generation TMS² technology with a very long service life compared to the majority of products on the market (application note available on request).

## 0 0102 ${ }^{\circledR}$ Innovation Performance and Design!

$\rightarrow$ Multiple, simple and fast connections
$\rightarrow$ Removable IP20
$\rightarrow$ A single screwdriver for both the output and input
$\rightarrow$ Attached to a metal baseplate, not plastic
$\rightarrow$ Removable control terminals
$\rightarrow$ SSR, mains and load status diagnostics.
$\rightarrow$ Output voltage from 24 to 690 VAC (600V-1200V-1600V peak)
$\rightarrow$ Very low zero-crossing level
$\rightarrow$ Large range of regulated AC and DC input voltage
$\rightarrow$ LEDs
$\rightarrow$ EMC compliant for the industrial environment
$\rightarrow$ UL/cUL, VDE (EN60950), IEC/EN60947-4-3, CE marking
$\rightarrow$ Itsm up to 2 000A and $I^{2} t>20000 A^{2} s$
$\rightarrow$ Can be associated with wircuit breaker for protection.

## MULTIPLE, SIMPLE AND FAST CONNECTIONS

## CONNECTION

 on the power side

Direct connection by wire or end fitting $2 \times 6 \mathrm{~mm}^{2}$ (AWG10) fine strand i.e. 32A
$2 \times 10 \mathrm{~mm}^{2}$ (AWG8) solid i.e. 50A

With tubular cable lugs
Up to $50 \mathrm{~mm}^{2}$ (AWG1) with or without adjustment i.e. 150A

Screw with lock washers
Improved shock and vibration resistance

CONNECTION on the control side

Using screws (SO7 / SO8 / SO9 / SOL)

Using pluggable spring connector technology (SOR)

REMINDER
SO7 random
SO8 ZERO-CROSS FOR ALL KINDS OF LOADS / HEAVY DUTY LOADS
SO9 zero-cross for standard industrial loads / resistive loads

# SINGLE PHASE SOLID STATE RELAYS 

## okpac ${ }^{\circ}$

SO7
$\rightarrow$ Random

celduc $®$ supplies "ready to use" solutions with built-in heatsinks.

| Product reference | Thyristor rating | Switching voltage | Peak voltage | Control voltage | 12 t | Protec. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| S0745090 | 50A | 12-275VAC | 600 V | $3-32 \mathrm{VDC}$ | $2800 A^{2} \mathrm{~S}$ | RC-VDR |
| S0763090 | 35A | 24-510VAC | 1200 V | 3.5-32VDC | $1250 A^{2} \mathrm{~S}$ | RC-VDR |
| S0765090 | 50A | 24-510VAC | 1200 V | 3.5-32VDC | $2800 A^{2} \mathrm{~s}$ | RC-VDR |
| S0767090 | 75A | 24-510VAC | 1200 V | $3.5-32 \mathrm{VDC}$ | $7200 A^{2} \mathrm{~s}$ | RC-VDR |
| S0768090 | 95A | 24-510VAC | 1200 V | 3.5-32VDC | $16200 A^{2} \mathrm{~S}$ | RC-VDR |
| S0769090 | 125A | 24-510VAC | 1200V | $3.5-32 \mathrm{VDC}$ | $24000 A^{2} \mathrm{~S}$ | RC-VDR |
| S0789060 | 125A | 24-690VAC | 1600 V | 3.5-32VDC | $22000 A^{2} \mathrm{~S}$ | - |

All these products must be mounted on heatsinks in order to reach nominal performance.

## SO8

## $\rightarrow$ Zero-cross for all loads

Typical applications: AC-53 motor loads and strong inductive loads.
The SO7 range provides instant switching (asynchronous/random) with voltage protection on input (Transil) and output (RC and VDR) depending on the model in question.

- Dim. $45 \times 58.5 \times 30 \mathrm{~mm}$ $(1.77 \times 2.28 \times 1.18 \mathrm{in})$

The SO8 range is designed for most types of loads / heavy duty loads
$\rightarrow$ Zero cross with low zero crossing level ( $<12 \mathrm{~V}$ )
$\rightarrow$ Voltage protection on input (Transil) and output (VDR) with very high immunity in accordance with standards IEC/EN61000-4-4 and IEC/EN610004-5, depending on the model in question
$\rightarrow$ Control current $<13 \mathrm{~mA}$ for the entire voltage range at any operating temperature.

All these products must be mounted on heatsinks in order to reach nominal performance.

## SINGLE PHASE SOLID STATE RELAYS

## celpac ${ }^{\text {T }}$

Reliability \& performance

$\rightarrow$ It has the same center-to-center fastening as the celduc SO and SC ranges,
$\rightarrow$ Maximum voltage up to 1600 V (690VRMS), 600VAC and 1200VAC as standard,
$\rightarrow$ Thyristor rating up to 75A,
Large input range : 3-32VDC with regulated current models,
$\rightarrow$ Models available with AC,
$\rightarrow$ Yellow input status LED,
$\rightarrow$ Over-voltage protection on the input,
$\rightarrow$ New generation of TMS ${ }^{2}$ technology for thyristors for a longer life expectancy,
Quick and easy connections,
$>$ Designed according to European standards
EN60947-4-3 (IEC947-4-3) and
EN60950 (VDE0805 reinforced insulation)
IEC62314-UL-cUL,
$\rightarrow$ IP20 protection with removable flaps (SU range) or cover (SA range),
$>$ Other protection devices available as an option : RC snubber, VDR, self turn-on.

The 22.5 mm wide SSR solution!

## A cost-effective and compact solution

With an installation width of only 22.5 mm , our celpac ${ }^{\circledR}$ solid state relays and contacts take up the least possible space, Reduced assembly time, simple wiring,
Reduced maintenance thanks to a very long service life,
A single screwdriver for both the output and input.

# SINGLE PHASE SOLID STATE RELAYS 

# celpac ${ }_{\text {TG }}$ 

 The 22.5 mm wide SSR solution! celduc ${ }^{\circledR}$ relais offers 2 options that can be clipped directly on to the SU/SUL/SUM range
## SAVE SPACE / REDUCE COSTS / WITH MORE FUNCTIONS

## CURRENT MONITORING MODULE

## ESUC

To combine with our SU/SUL/SUM

## MAKE THE MOST OF YOUR SSR

Diagnostics and control of up to 5 heater loads:
Continuous current monitoring,
Current set point training function via a push-button or external binary input,

2 alarm thresholds (+/-16\%),
Partial load break detection,
Open load detection,
SSR short circuit detection.

## WHY CHOOSE THIS OPTION?

[^0]
## TEMPERATURE CONTROLLER PID, CURRENT MONITOR AND COMMUNICATION INTERFACE IN ONE UNIT

## ECOM0010

To combine with our SU/SUL/SUM

## MAKE THE MOST OF YOUR SSR

Temperature controller with :

- PID controller with automatic or manual tuning, - Insulated inputs for J, K, T, E thermocouples, PT100 to come
Auxiliary output for heating, cooling, alarm or to control a 3 phase Solid State Relay, Loop and heater break alarms.
Current monitoring up to 50A with current transformer
RS485/Modbus RTU serial link (others available on request)

Power supply : $24 \mathrm{Vdc}+/-10 \%$

## WHY CHOOSE THIS OPTION?

ECOM is the most compact solution available on the market, incorporating the latest measuring and control technology.
$\rightarrow$ By reducing wiring costs and minimizing the size of electrical cabinets, this solution is the answer to your needs.

## POWER SSRs WITH DIAGNOSTICS

celduc® relais offers a variety of relay diagnostic solutions.
These relays let the user know the status of the load (resistive load), the relay output and the network.

## WHICH SOLUTION TO CHOOSE?

Here are a few examples of our customers' requirements:

## REQUIREMENT

- 1 RELAY for 1 heating element
+1 sensing element
- 1 RELAY for 1 heating element
+1 rapid sensing element
+ compact and ready to use solution
SOLUTIONS
$\rightarrow$ SOD
$\rightarrow$ SILD

## ADVANTAGES

(for both SOD and SILD)

$\rightarrow$ These relays let the user know the status of the load (connected or not), the relay output (closed or not) and the network (fuse or circuit breaker status) in the power circuit, via an NC (Normally Closed) diagnostic contact.
$\rightarrow$ Volt-free
$\rightarrow$ A single input PLC that can be placed in a series
$\rightarrow$ Easy to use
$\rightarrow$ The diagnostic function does not require an external power supply
$\rightarrow$ Quick reaction time $<100 \mathrm{~ms}$

## REQUIREMENT

1 relay for several loads + need for a compact and ready to use solution

## SOLUTIONS

$\rightarrow$ ESUC current detection module combined with our SU/SUL solid state relays

## ADVANTAGES

$\rightarrow$ Detection of partial load break or current surge (operates with up to 5 identical loads)
$\rightarrow$ Three-phase or possible
 multizone use
$\rightarrow$ Minimal dimensions: only 22.5 mm wide

## REQUIREMENT

Connect/disconnect areas with heating :
This solution is ideal for thermoforming machines where the heating surface needs to be adapted to the size of the plastic sheets intended for preheating. Standard diagnostic solid state relays display an error when a heated area is disconnected. This requires a specific and sometimes complex management of the diagnostic signals.

SOLUTIONS
$\rightarrow$ SOI

## AVANTAGES

$\rightarrow$ The main function of the SOI range is to switch the load current. It also provides
 information about the presence (or lack thereof) of the output current which must then be interpreted by the user or the system.

## REQUIREMENT

Reading the current and alarms via a communication interface

## SOLUTIONS

$\rightarrow$ Combined ECOM module with our SU / SUL solid state relays

## ADVANTAGES

$\rightarrow$ This product, which has been designed for temperature control (with built-in PID), can also be used to:

- Measure the load current
- Measure the ambient temperature, the process or even the relay or its heatsink (built-in J, K, T, E thermocouple input)
- Create alarms (current, temperature, relay status)
- Adjust the power on the load via a chronoproportional control
$\rightarrow$ It communicates via an RS485 link and a MODBUS RTU protocol.
$\rightarrow$ In order to view the status locally, it has 3 LEDs and a configurable output.

## POWER SSRs WITH DIAGNOSTICS

## DIAGNOSTIC RELAY

Our power SSRs with diagnostics are housed in celpac units, these include our SILD and okpac® ranges (to mount on heatsinks) and our SOD and SOI ranges.
These relays let the user know the status of the load (resistive load), the relay output and the network via an NC (Normally Closed) diagnostic contact.
The diagnostic function does not require an external power supply (celduc® patent). The contacts of different relays can
also be placed in a series. It is possible to use these relays for diagnostics in a three-phase system, star connection wiring without neutral.
Our SOI range includes a current transformer (CT) and a contact for signaling. This makes it possible to switch the load current by providing information about the presence (or lack thereof) of the output current which must then be interpreted by the user or the system.

All these products must be mounted on heatsinks in order to reach nominal performance.

- Dim. $45 \times 58.5 \times 33.6 \mathrm{~mm}$ $(1.77 \times 2.28 \times 1.30 \mathrm{in})$

## SOI

## NEW

OPERATION: By applying or removing a voltage on the control input, the SOI relay switches or disconnects the current in the load. If the value of the load current is greater than the factory setting threshold, the current transformer included in the SOI will close the contact for signaling. It therefore indicates that a current is flowing in the load, then the user or the system interprets this status.

## ADVANTAGES

$\rightarrow$ Reduction of quantity, cost and time of wiring
$\rightarrow$ Elimination of the need to pass the power cables through a current transformer
$\rightarrow$ Elimination of costly analogue inputs on the PLC

| Product reference | Thyristor rating | Switching voltage | Peak voltage | Control voltage | $1^{2 t}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |

All these products must be mounted on heatsinks in order to reach nominal performance.

## SINGLE PHASE SOLID STATE RELAYS

## SSR with "FASTON" terminals

Solid State Relays with "FASTON" terminals are ideal for the food and beverage industry for currents less than 20A.
celduc® relais offers a wide range of single phase products with "FASTON" terminals, and also two-phase (see page 24) and four-leg power SSRs (see SCQ range page 23).

Miniature relays available with "FASTON" terminals or with pins for printed circuits.

| Product reference | Thyristor rating | Switching voltage | Control voltage | Specifications |
| :---: | :---: | :---: | :---: | :---: |

All these products must be mounted on heatsinks in order to reach nominal performance.

These relays are designed for use in applications where low electromagnetic emission is essential: household and electrical appliances, information technology and medical equipment. The range complies with the EN 500811 standard (Electromagnetic compatibility. Generic emission standard. Residential, commercial and light industry).
Also check out our SON range on page 14.

$(1.73 \times 2.28 \times 1.26 \mathrm{in})$

## - for fast connections!

## SP7/SP8

With its high immunity components, built-in overvoltage protection combined with 800 Vpic power elements, these relays can be used with any type of load, such as heating or controlling single phase asynchronous motors. This range is ideal for the food and beverage industry.

## FLASHING RELAYS

## ST6

| Product <br> reference | Switching <br> current | Switching | Poltage | voltage |
| :---: | :---: | :---: | :---: | :---: |

All these products must be mounted on heatsinks in order to reach nominal performance.

The ST6 power flashing solid state relay range is designed for alternating current. With FASTON outputs, they can switch loads up to 12A below 1250VAC or loads up to 25A under 180-280VAC.
When voltage is applied, the output flashes at a frequency of 1 to 2 Hz in accordance with the position of the external switch.

- Dim. $67 \times 38 \times 37.5 \mathrm{~mm}$ $(2.64 \times 1.50 \times 1.46 \mathrm{in})$

## TWO-PHASE SOLID STATE RELAYS

Our two-phase range provides two solid state relays in a standard compact 45 mm enclosure. They are ideal for three-phase applications with two-phase disconnection only.

## WIRING EXAMPLES

Control of 2 single-phase wired heating elements.

Two-phase SOB SSR to control heating elements wired in a star connection. Specifically designed for balanced low voltage loads without neutral.

Two-phase SOB SSR to control heating elements wired in a delta connection. Specifically designed for high voltage loads, balanced or not.

## SOB5

- Power and control connections by FASTON terminals (Fig.1)
- Double input with connector CE100F ITWPANCON type or similar + Power connection by FASTON 6.3 mm terminals with IP20 protection (Fig.2)

## THREE-PHASE SOLID STATE RELAYS

celduc $\circledR^{\circledR}$ relais has several ranges of solid-state relays for three-phase applications. Various models are available with ratings up to 125A max. per phase, with either AC or DC input and with instant (asynchronous) or zero cross (synchronous) switching.

## WIRING EXAMPLES

A three-phase SMT8/ SGT8 type SSR controlling an AC-53 three-phase motor with thermal magnetic protection.

An SV9 inverter type three-phase SSR reversing the rotation direction of a threephase asynchronous motor.

An SMT/SGT type threephase SSR to control heating elements wired in a star connection with fuse protection.

An SMT/SGT type threephase SSR to control heating elements wired in a delta connection with modular circuit breaker protection.

An SMB/SGB type SSR to control
heating elements wired in a star connection with fuse protection.

## EASY AND FAST CONNECTIONS

## cel3pac®

- Version with 100 mm installation width,
- Small footprint: 34.7 mm height,
- Improved connections to increase switching current limits,
- Increase in the size of terminals on the power side: up to $50 \mathrm{~mm}^{2}$

## sightpac®

- Compact 45 mm version,
- Same fixing distance as our okpac ${ }^{\circledR}$ and celpac ${ }^{\circledR}$ ranges,
- An innovative and scalable range (optional future modules).

Connection on the CONTROL SIDE
 4-pole plug 4-pole plugg spring connector (others available on request)

Standard with screws

With spring connectors

With pluggable connector

## sightpac ${ }^{\circledR}$

NEW

SMB7/SMT7 random orinstant switching.
SMB8/SMT8 zero cross for heavy duty loads.
SMB9/SMT9 zero cross forac-51 Resistive Loads

## SMB

This range has been designed to control three-phase loads with a delta connection, if balanced, with a star connection without neutral. Two of the three phases are switched, the third is directly connected.
$\rightarrow 2$ leg three-phase SSRs

## SG9 SV9 SW9

$\rightarrow A C$ inverter

These relays are used to reverse the rotation direction of a motor.
The SV9 range is housed in an IP20 enclosure.
The SW9 range is ready to use with a heatsink and DIN rail mounting included.
They are all supplied with LED indicators and are protected from being gang-operated (interlocking).
Available with a 40 or 47.6 mm fixing distance ("E" suffix). $\qquad$

## XKRD SGRD

$\rightarrow$ DC inverter

The SGRD inverter includes all the control electronics as well as short circuit protection and lockout to prevent the two rotation directions from being gang-operated.
Ready to use and mounted on a DIN rail, the XKRD30506 module consists of four static switches pre-wired in the inverter's rotation direction for a DC motor (100W @ 24VDC).

## MOTOR CONTROL

## SO4

## $\rightarrow$ Single phase starters

This range of single-phase starters is designed for universal motors or lamps.

## ANALOGUE CONTROL RELAYS

 celduc $®$ relais offers a wide range of controllers with various control modes and input types.Types of input control:
0-10VDC, 4-20mA , potentiometer or PWM (Pulse Width Modulation).

## 3 control modes are available:

- Burst control mode controllers
- Full wave pulse controllers
- Phase angle controllers

## A technology for every application!

## WHICH MODE TO CHOOSE?

$\rightarrow$ Comparison of the 3 control modes - setting to $50 \%$

|  | Working principles | Advantages | Typical applications |
| :---: | :---: | :---: | :---: |
| BURST CONTROL MODE <br> SO3 RANGE <br> (page 33) | In a given cycle time (in this case, 1 or 2 seconds), the variation of the load power is achieved by eliminating whole alternations. Eliminations are distributed in accordance with a complex rule. Thus, in this example, the load is only powered to $50 \%$ because of the elimination of one alternation out of two. | This type of control makes it possible for the power to be finely modulated in accordance with the analog control, while limiting disturbances. | For controlling resistive loads at low thermal inertia, such as short wave infrared emitters (infrared heater bulbs) |
| FULL WAVE PULSE CONTROLLERS <br> SG5 RANGE <br> (page 34) | In a given cycle time (variable depending on the models), the variation of the load power is achieved by eliminating whole alternations. The elimination is performed linearly in accordance with the Ton/Tcycle duty cycle requested by the control input. Thus, in this example, the load is only powered for $50 \%$ of the cycle time (Ton/Tcycle=0.5). | This type of control has the advantage of not generating interference since trigger takes place at around 0 voltage. | Suitable for high inertia loads (industrial furnaces, etc.). |
| PHASE ANGLE CONTROLLERS <br> SINGLE PHASE <br> SG4-SO4-SIL4-SIM4 RANGES <br> (pages 32-33) <br> THREE-PHASE SGTA AND SVTA RANGE (page 35) | In terms of the principle of the light dimmer, this control mode makes it possible to finely vary the load power by removing a part of the supply voltage sinusoid in accordance with the control input. <br> The proportional response between the control input and the power output depends on the controller model and can be linear in angle, $\mathrm{U}^{2}$ or in Urms. <br> Thus, in this example, the load is only powered to $50 \%$ because of the elimination of half of the supply voltage's half cycles. | This control mode makes it possible to finely adjust the load power, for example, when the accuracy of the temperature regulation is prioritized over the electromagnetic disturbances generated by this type of solution (a filter is recommended). | Mainly <br> for loads <br> that rapidly react when faced with voltage variations (lamps, motors, etc.). <br> Also for DC loads behind a rectifier bridge (heater wires, Peltier effect modules, etc.). |

## ANALOGUE CONTROL RELAYS

## SG4

$\rightarrow$ Single phase angle controllers

This relay is designed to proportionally vary the switching point on a sinusoidal mains supply via an isolated analogue control signal thereby varying the RMS voltage at the terminals of the load. Typical applications: light dimmers, single phase
motor variable speed drives (vibrating bowl feeders, etc.), heating element regulation.
Model equipped with an LED and protection via RC and VDR network. Built-in power supply.

- Dim. $45 \times 58,2 \times 27 \mathrm{~mm}$ $(1.77 \times 2.28 \times 1.06 \mathrm{in})$

Other functions are available: phase angle controllers, full wave pulse controllers, burst control mode controllers, soft starting controllers, flashing timers, etc. Please contact us.

## ANALOGUE CONTROL RELAYS

## SIL4 / SIM4

$\rightarrow$ Single phase angle controllers

Our SIx4 range is housed in a celpac® unit (ready to use). The microcontroller managing these controllers can adapt the function to your application. This range is mainly designed for resistive loads.

$(1.77 \times 3.15 \times 4.57 \mathrm{in})$

## SO3

## $\rightarrow$ Burst control mode controllers ( $\mu \mathrm{P}$ based unit)

This control mode is ideal for resistive loads that have a low thermal inertia, such as short wave infrared emitters (infrared heater bulbs). It also makes it possible for the power to be finely modulated in accordance with the analog control, while limiting disturbances.
This control mode consists of switching the streams of full sine waves equally distributed along a fixed modulation period (TM) in accordance with the analog input signal. The $\mu \mathrm{P}$ constantly computes the number of full sine waves to be switched along the TM period.

$(1.77 \times 2.28 \times 1.06 \mathrm{in})$

## MULTIZONES POWER CONTROLLER

Taking into account the identified market needs, celduc $®$ relais has developed infrared lamp temperature control units. The technology used, based on solid state relays for power associated with complex electronics, makes it possible to provide precise and efficient power control of up to 12 lamps.
A program is used to inform the PLC of the operating state and possible faults in the manufacturing process.

## Characteristics of the control boxes:

- Heating unit for a maximum of 12 IR channels ( 4 kW max. per channel and 36 kW max. per unit)
- $\mathrm{U}^{2}$ type mains power variation correction (syncopated)
- Detections: broken lamp < 250 ms ; overvoltage/undervoltage; overheating; broken fuse
- Built-in protection
- Control using Profibus DP

## ANALOGUE CONTROL RELAYS

## SG5

$\rightarrow$ Full wave pulse controllers

This relay has an analog input isolated from the mains to proportionally vary the operating duty cycle of a load $(t / T)$ in relation to the input voltage. This control mode consists of switching the streams of full sine waves equally distributed along a fixed modulation period (TM) in accordance with the analog input signal. Models equipped with an LED and protection via RC and VDR network.
Application: temperature control.

| Product reference | Thyristor rating | Switching voltage | Control voltage | $12 t$ | External power supply required? |
| :---: | :---: | :---: | :---: | :---: | :---: |
| SG541020 | 10A | 230VAC | 0-10VDC | $72 A^{2} \mathrm{~s}$ |  |

* Maximum current, max. cross sectional area $=10 \mathrm{~mm}^{2}$, use double wires or special adaptors for currents $>50 \mathrm{~A}$. Please refer to the heatsink installation instructions.
$\rightarrow$ Three-phase phase angle controllers with six proportional control thyristors (balanced currents, less harmonics, etc.)
$\rightarrow$ Start and stop ramps (increases the unit's service life)
$\rightarrow$ Diagnostic functions
$\rightarrow$ Compact housing.

## SGTA

## - MAIN CHARACTERISTICS•

$\rightarrow$ Minimal dimensions
$\rightarrow$ Extensive network frequency $(40-65 \mathrm{~Hz})$
$\rightarrow$ Built-in overvoltage protection
$\rightarrow$ High $1^{2}$ t power elements
$\rightarrow$ Control of isolated thyristors using optical couplers during the entire cycle and the 3 phases (balanced currents, less harmonics, etc.)
$\rightarrow$ The minimum voltage applied on the load is the lowest in the market (3\% RMS compared to 40\% RMS offered by our competitors!)
$\rightarrow$ A wide range of options are available on request
$\rightarrow$ Manufactured in compliance with the major international standards: EMC, LVD, UL, VDE.

- TYPICAL APPLICATIONS •
$\rightarrow$ Resistive loads for temperature control (infrared lamps, furnaces, heating elements, etc.)
$\rightarrow$ Resistive loads for lighting control (filament and halogen lamps, stage lighting, etc.)

## MAGNETIC PROXIMITY SENSORS We are the experts

If you are looking for position, motion, presence, level or speed detection, then check out our range of magnetic proximity sensors.
We can even design a specific product for your applications! 70\% of our magnetic proximity sensors are developed in accordance with our customers' specifications.

At celduc®, we are constantly evolving in line with new applications and market developments. With our customers, we want to share our 45 years of experience and two detection technologies:

- The reed switch, a dry contact hermetically sealed within a tubular glass envelope. It remains a simple, reliable and low cost solution.
- Silicon, with two types of electronic cells, magnetoresistance or Hall effect which have different characteristics that can be used in a wide range of applications.

## Contents

## TELL US ABOUT YOUR PROJECT AND WE’LL PROVIDE THE SOLUTIONS.

## Applications

## INDUSTRY

Counting
Cylinder positions
Machine safety
Advertising panel
Actuator position
Liquide level
Speed control

## HOME AUTOMATION

Burglar alarms
Window position
Lifts
Blind control
Small and large appliances
Centralized Building Management
Swimming-pools

## AVIATION,

SPACE AND MILITARY
Fuel and petroleum product levels Oil and water levels
Sensors and actuators for Airbus
Camera shutter control

SPECIFIC APPLICATIONS
ATEX
(explosive atmospheres)

## WHAT IS A MAGNETIC PROXIMITY SENSOR?

The sensing element of a magnetic sensor can be a Hall cell, a magnetoresistive cell or a Reed switch which detect the presence of a magnetic field, in general this is a permanent magnet. It detects the position of a magnet without contact and transmits an electrical go-no-go or analog signal, depending on the model in question.

## REED SWITCH SENSORS

A REED switch consists of a pair of ferromagnetic flexible metal contacts in a hermetically sealed glass envelope, filled with an inert gas. The contacts are usually normally open, closing when a magnetic field is present, or they may be normally closed and open when a magnetic field is applied.

## THERE ARE DIFFERENT CONTACT TYPES

- NO / A Form > Normaly Open

- NC / B Form > Normaly Closed
- BISTABLE NO / L Form
- CHANGE-OVER / C Form

## THE MAIN ADVANTAGES ARE:

$\rightarrow$ No power supply required,
$\rightarrow$ Can operate in harsh environments,
$\rightarrow$ Extensive sensing range (depending on the magnetic sensitivity of the switch, the power ofthe magnet as well as the magnetic environment),
$\rightarrow$ Economic solution.

REMINDER : Reed switches and detectors using reed switches can switch both AC and DC currents.
The values provided in our data sheets for current and voltage are maximum values. It means that in DC applications it represents the maximum switching current and voltage. In AC applications these values are peak values. To calculate the nominal value you should divide this by 1.414.

## ELECTRONIC SENSORS

Electronic sensor detection is based on the occurrence of a voltage proportional to the magnetic field on the Hall sensors and on a change in resistance also proportional to the magnetic field on sensors fitted with magneto resistors. The variations of these signals are processed by the sensor which emits an go-no-go or analog signal to the user in accordance with the customer's needs. These sensors require a power supply.

## THE MAIN ADVANTAGES ARE:

$\rightarrow$ They operate at high a frequency: > 20 kHz
$\rightarrow$ Shock and vibration resistant
$\rightarrow$ Long service life

## CONTROL MAGNETS

To control REED switch or HALL effect magnetic sensors, a magnet must be used. Please go to page 54 to view our complete range of coated and uncoated magnets.

## THE SENSOR/MAGNET COMBINATION MUST BE SELECTED IN ACCORDANCE WITH THE TERMS OF USE

$\rightarrow$ Researched activation distance (action and release),
$\rightarrow$ Operating temperature,
$\rightarrow$ Operating mode (perpendicular or parallel movement? Face-to-face activation?),
$\rightarrow$ Geometry,
$\rightarrow$ Required corrosion resistance, etc.

REMINDER: The guaranteed activation distance depends on the sensor's sensitivity and the magnet's power. In this selection guide, we provide an example of a guaranteed activation distance for a given magnet. However, celduc® is always here to help you choose the best magnet/sensor combination for your needs.

## CUSTOMER SPECIFIC PRODUCTS

## MORE THAN 50\% OF OUR SENSORS ARE MANUFACTURED IN ACCORDANCE WITH CUSTOMER SPECIFICATIONS. HERE ARE A FEW EXAMPLES:

## AIRCRAFT

Supplying this industry is proof of our reliability. celduc $\circledR^{\circledR}$ relais has developed special sensors to detect the opening/closing of doors, for example, push-buttons used to detect open/closed doors in the Airbus A380; sensors to detect tank refueling in the Dassault Rafale and Saab JAS 39 Gripen fighters; level sensors for AIRBUS humidifiers, etc.

## NUCLEAR

celduc® relais has designed and manufactured sensors for controlling nuclear reactors. These sensors are used in a system with the highest safety level. Our sensors have therefore undergone rigorous performance testing in extreme conditions. Developing sensors for nuclear reactors once again demonstrates the ability of celduc® relais to create customized solutions in industries where reliability is critical.

## AGRICULTURE

In agriculture, there are many ways in which our magnetic sensors can be applied. celduc® has developed a magnetic proximity sensor for metal detection. No more need for magnets!

A TEAM OF EXPERTS AT YOUR SERVICE

## SENSORS AND CONNECTED OBJECTS

Connect our sensors thanks to our energy efficient mobile communication solutions! Using networks made for the internet of things, our energy efficient wireless connection modules can connect all types of detection needs. Thanks to our professional expertise in the field of magnetic detection and the combination of reed technology and LPWAN networks (low-power wide-area network), our sensors are:
autonomous: up to 10 years of uninterrupted use without changing or recharging the batteries,
$\rightarrow$ connected: directly access the status of your position and level sensor from your mobile or computer and be alerted of any changes,

$\rightarrow$ simple to use: no SIM card or complex parameters, manage your sensors directly from our web platform and connect anywhere in the world with the same model,
$\rightarrow$ economical: much more affordable than traditional mobile networks, LPWAN solutions are particularly well suited to connected sensors and now cover more than $90 \%$ of world territory.

## SAFETY MAGNETIC SENSORS

By preventing any dangerous machine movements, they protect machine operators when opening protective guards, doors or covers.

## A SOLUTION FOR ALL REQUIRED SAFETY LEVELS!

3 SAFETY LEVELS COMPLIANT WITH STANDARDS EN ISO 13849-1 AND EN ISO 62061:
The latest safety standards are based on concepts such as the security level (SIL) or the performance level (PL).

SIL 1
$P L=C$

+SAFETY MODULE ADAPTED
SIL 1 / 2 / 3
$P L=C / D / E$

## Sensors for lifts <br> $\rightarrow$ Lift position detection <br> $\rightarrow$ Door opening control

celduc® relais range includes Reed switch or "all Electronic" magnetic sensors which use Hall effect sensors or magneto resistors. It is important to clearly define the "sensor + magnet" combination in the terms of use.
celduc® relais is here to help you choose the right product for your application. We can supply you with sensors as well as magnets/laminated plastic magnets.
Advantages of celduc® relais sensors:

- resistant to heat, cold air, humidity, dust, etc. in their operating environment
- exceptional reliability
- extensive sensing range
- good withstand capacity to impacts
- IP67

## REED MAGNETIC SENSORS

## LeVEL \& FLOW SENSORS

## - ${ }^{\circ}$ 『 Solutions

Connect our Reed sensors to a communication system so that they are autonomous and networked. (see page 41)
celduc relais $®$ has a wide range of standard or specific level and flow sensors with Reed switches.
Since our sensors are available in various plastic and stainless steel housings, we can accommodate a wide range of applications, depending on the chemicals and operating temperatures used.
For specific applications, (e.g.: potentiometric scale, special level sensors) please contact us: we can develop products to meet your needs.

## LIQUIDS COMPATIBILITY

Compatible with acid : acetic, citric, formic, lactic, nitric diluted, phosphoric, sulphuric diluted ; soda ; alcohols : ethanol, methanol, propanol ; glycol ; mineral oil ; water
Not compatible with the following solvents : chloroforme, methylene chloride, trichloroethylene, toluene ; hard acids.
$\rightarrow$ Compatible with fuels, engine oil, kerosene, lubricaring oil, mineral oil, vegetal oil,
$\rightarrow$ Not compatible with almost all acids, methylene chloride
$\rightarrow$ Acceptable resistance to water.
$\rightarrow$ Compatible with almost all the liquids except hard acids.

## REED MAGNETIC SENSORS

## OPERATION

Thanks to its magnetic field, a float fitted with one or more magnets moves with the fluid and activates a hermetically sealed REED contact.

## ADVANTAGES

The following advantages ensure user safety, repeatability, accuracy and operational reliability combined with low maintenance.
$\rightarrow$ A single moving part: the float.
$\rightarrow$ Since Reed switches are only activated by a magnetic field, there is no wear and tear.
$\rightarrow$ Because Reed switches are hermetically sealed, there are no ingress protection issues.

(2) Available in an approved version for ATEX zones (see page 53)

## APPLICATIONS

HEATING (air-conditioning, heaters, humidifiers) To detect the tank's water level.

DOMESTIC EQUIPMENT (electronic toilet flush system, solar energy) To detect the water level.
FOOD INDUSTRY (coffee machines, vending machines)
$\rightarrow$ The sensor provides information which activates a pump to maintain the water level.
MEDICAL EQUIPMENT (sterilizers)
$\rightarrow$ Water level
WATER TREATMENT (water purifiers, water makers)
The sensor is used to detect the required supply level.
SWIMMING POOLS (water treatment, water heating)
$\rightarrow$ Water level and flow.
AUTOMOBILE (to check water levels, ABS brake fluid, presence of water in fuel, washer fluid)

$\rightarrow$ To detect the various liquid levels.
VARIOUS INDUSTRIES (self-service photo booths, electric car wash, etc.)

## REED MAGNETIC SENSORS

## Sensors for WINDOW FRAMES

## ]®T Solutions

Connect our Reed sensors to a communication system so that they are autonomous and networked. (see page 41)

This new range has been developed to detect the position of a window: open or closed (monitoring opening).
Typical applications are centralized building management systems, air conditioning and heating. Main advantages are:
$\rightarrow$ Installation and connection time reduced by half: locking pluggable connectors, clip-mounted (no fixing screws)
$\rightarrow$ Open, closed contact, inverter, safety loop
$\rightarrow$ Dust and damp proof contact.

## CONTROL MAGNETS

Range of standard permanent magnets required to activate our magnetic sensors.
To control Reed switch or Hall effect magnetic sensors, a magnet must be used.
Choose from one of celduc® relais' 3 different ranges of magnets, these are differentiated as follows: operating temperature, geometry and corrosion resistance.

|  | Material | Max. operating temperature | Temperature drift coefficient (reversible) | Corrosion resistance |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Alnico | $500^{\circ} \mathrm{C}$ | $\begin{gathered} \text { very low } \\ \left(-0.025 \% \text { per }{ }^{\circ} \mathrm{C}\right) \end{gathered}$ | Good resistance | generally supplied in bars whose length must be at least 4 times the diameter |
|  | Ferrite | $250^{\circ} \mathrm{C}$ | high ( $-0.20 \%$ per $\left.{ }^{\circ} \mathrm{C}\right)$ | Very good resistance | generally supplied as block rectangular type, discs or rings |
|  | Samarium Cobalt (SmCo) | $250^{\circ} \mathrm{C}$ | low (-0.04\% per ${ }^{\circ} \mathrm{C}$ ) | Very good resistance | generally supplied in blocks or pieces |
| Rare earth | Neodymium Iron Bore (NdFeBo) | 80 to $160^{\circ} \mathrm{C}$ (see data-sheets) | low (-0.10\% per ${ }^{\circ} \mathrm{C}$ ) | Bad resistance (must have tin or nickel coating) | generally supplied in blocks or pieces |

We at celduc ${ }^{\circledR}$ relais are always here to help you choose the best magnet/sensor combination for your needs.

## Reed Switches

Detecting motion, positions and levels in harsh environments without any mechanical links between the moving parts, maintenance-free and subject to a magnetic field. This is the Reed contact's daily challenge.
These contacts are used in a wide range of sectors, such as electronic banking, space, automation, telecoms, etc.

## Reed Relays in D|P enclosure

The most popular and the most industrious in our range. It has all contact combinations. It is designed to switch PLC inputs, signals from sensors or safety devices.

## REED RELAYS \& SWITCHES

The products on this page do not represent all of our range and corresponding options. If you cannot find a product that meets your needs, please contact us.

## High voltage relay

The withstand voltage between the contacts is greater than 10KVDC. The withstand voltage between the coil and the contacts is greater than 14VDC.

[^0]:    Rapid fault detection (instantaneous alarm)
    Maintenance
    Fast-acting checks to ensure that all heating elements are operating correctly
    $\rightarrow$ Product quality and reliability (for example, in plastics processes, a faulty heating element can have a significant impact on the appearance of a finished product)
    $\rightarrow$ With an installation width of only 22.5 mm , it takes up minimal space,
    Less wiring costs

[^1]:    *Refer to the data sheets
